

## Spinning Machine Type PICCOLO-185

### Top Quality Hollow Chocolate Products

The PICCOLO-185 is used for the manufacture of excellent quality hollow figures, balls, liqueur bottles, half shells, etc. All the products have pore-free walls of even thickness. The vibration level is steplessly adjustable. The closed construction means that all parts are freely accessible and easy to clean. An overload clutch is fitted to ensure the safety of the operating staff. The machine is designed for smaller production volumes. It is also possible to manufacture very large hollow figures.

#### Capacity

The capacity depends on the type of product and the ambient temperature

Example: 6 minutes spinning time  
= 160 moulds per hour

Maximum mould size  
790 x 450 mm

#### Equipment

Two rotating drums with a total of 8 holder systems

Standard version with magnetic mould holders

4 permanent magnets for two moulds per magnetic mould holder

Option of mould holders with quick release lock

Maximum of 16 moulds on the machine

Gear drive for maintenance-free running

#### Technology

Robust, low-noise construction

Drum drive with two speeds

Adjustment of vibration by way of frequency-controlled electric motor

Non-oscillating bearing assembly of vibrating shaft

Rotation of holder systems by way of bevel gears

Bilateral fan for precooling of moulds

Friction clutch for operating safety
